

A True Reliable Workhorse

William W. Meyer & Sons, Inc. is the original equipment manufacturer of duct cleaning equipment, vacuums and accessories. Meyer firmly believes in only producing the best products which is why all of our air duct cleaning products use the push /pull cleaning technique, the most effective way currently available. The push/ pull concept uses compressed air and physical agitation to break debris free and push it through the duct work while a powerful vacuum downstream pulls loosened material through and out of the HVAC duct system.

Our Zephyr vacuum is currently the most inquired about and most sold duct cleaning vacuum that Meyer manufactures. The Zephyr's design combines a custom engineered fan and a compressor package driven by a single engine. It's suited for trailer or truck installation. Easy maintenance is a key feature requiring only routine engine maintenance and periodic inspection of filter bags. The Zephyr can be used for both residential and commercial duct cleaning jobs.

Because of its growing popularity, Meyer has been able to sell the Zephyr using customer referrals. When an inquiry is received we refer our potential customers to a contact list of satisfied Zephyr owners.

Scott Smith from the ServiceMaster of St. Cloud, MN, "We have owned our Zephyr since 2006. It is a true reliable work horse for us that requires little maintenance."

Tim White from the Sears in Manassas, VA (Sears' number one Duct Cleaning Franchise), "We've been running our Zephyr 7 days a week since we got it."

Bob McDonald, President of Modernistic Restoration and Cleaning of Michigan, "We just purchased our third unit in MI with the possibility of adding at least 2 more this year if things continue to pick up."

If you're thinking of starting a new business or adding Duct Cleaning as an additional profit center to an existing business the Zephyr package is a wise economical choice. Our customers are our best salesmen.
